

# **POLICY AND INSTITUTIONAL SUPPORT FOR SMART AGRICULTURAL MACHINERY - MALAYSIA OVERVIEW**

**Dr. Azman Hamzah, Dr. Arina Mohd Noh, Dr. Siti Noor Aliah Baharom,  
Mohd Nadzim Nordin, Khairul Anuar Shafie, Siti Hawa Ahmad Ramli**

**Malaysian Agricultural Research and Development Institute (MARDI)  
Malaysia**

ReCAMA Workshop on Smart and Sustainable Agricultural Mechanization  
Friday, 27 May 2022

# PRESENTATION OUTLINE

- Introduction on smart agriculture machinery
  
- Policy and regulation for smart agriculture in Malaysia
  - National Fourth Industrial Revolution (4IR) policy
  - National Agro-Food Policy 2.0
  - National Food Security Action Plan
  - Unmanned Aircraft System (UAS) regulation
  
- Institutional support and involvement
  - MARDI Agriculture Modernization Cluster Projects
  - Start-up company in smart agriculture machinery
  
- Collaboration with private sector and foreign agencies
  
- Conclusion

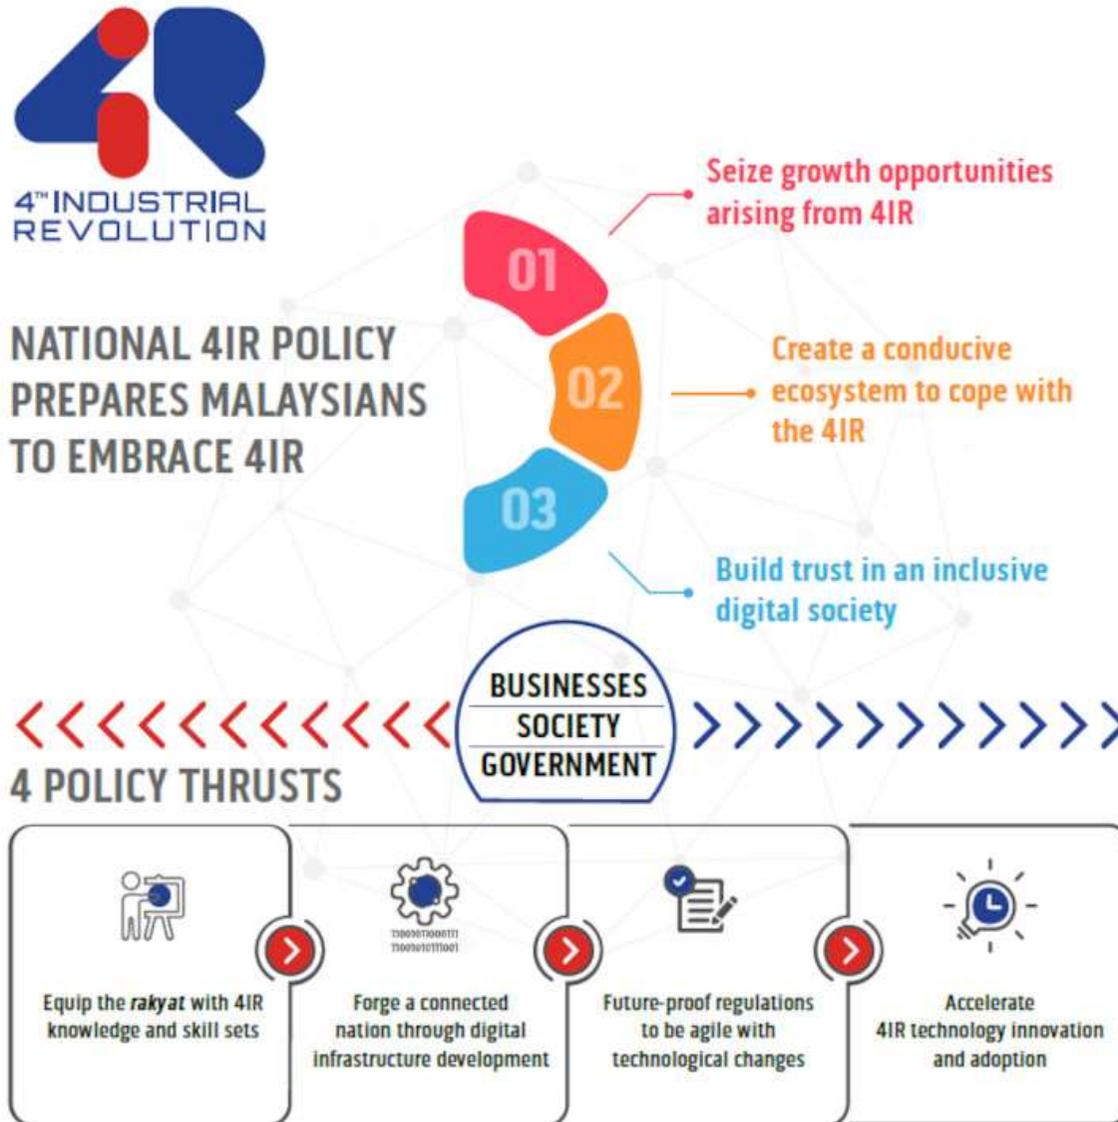

# SMART AGRICULTURE MACHINERY

- ❑ Advancement of farming technology have revolutionized the agricultural farming sector in past few years.
- ❑ Rapid changes trigger by new technologies such as the Internet of Things (IoT), Cloud Computing and Artificial Intelligent (AI) enhance the development of smart agricultural machinery
- ❑ Example of smart agriculture machinery:
  - Autonomous tractors extremely promising for agriculture. The innovative low-emission vehicles operate efficiently and independently, while also protecting the soil. Solve farming labor shortages
  - Agricultural drones
- ❑ Benefits of smart agriculture machinery
  - Improved sustainability
  - Increased work efficiency
  - Minimized agricultural input

## POLICY AND REGULATION FOR SMART AGRICULTURE IN MALAYSIA

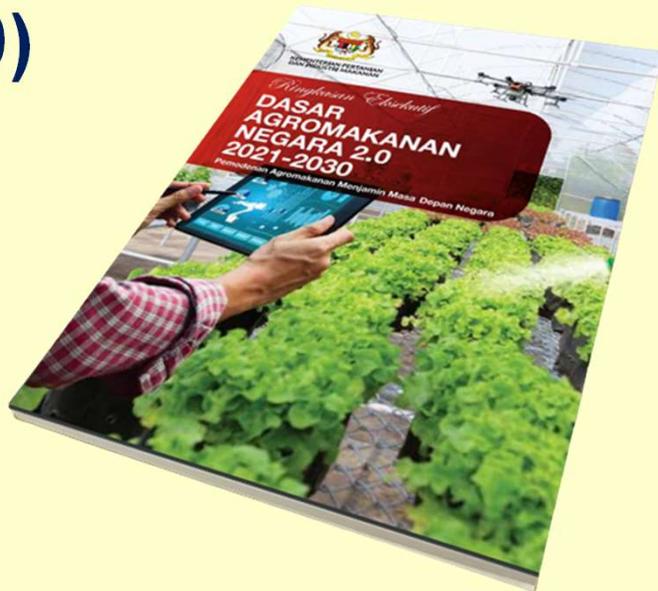

- ❑ Agro-food sector contribute income to the Malaysia economy with Gross Domestic Product (GDP) growth increased 6.8% i.e., RM51.3bil in 2020 compared to RM28.3bil in 2011
- ❑ Government implement policies to expedite smart agriculture transformation in Malaysia
- ❑ Among the policies are:-
  - **National Fourth Industrial Revolution (4IR) policy (2021-2030)**
  - **National Agro-Food Policy (2021-2030)**
  - **National Food Security Action Plan (2021-2025)**

# NATIONAL FOURTH INDUSTRIAL REVOLUTION (4IR) POLICY (2021-2030)

# NATIONAL AGRO-FOOD POLICY 2.0 (2021-2030)

## THE 2021-2030 NATIONAL AGROFOOD POLICY (DAN2.0)

- Was launched on Oct 25, 2021
- Is a continuation of DAN 2011-2020 which helped increase growth in the agrofood sector
- Has an average annual growth target of 4.5% under the 12th Malaysia Plan (RMK12)

Policy focus:

### STRATEGY

#### 1 SHIFTING TO SMART AGRICULTURE

- Stressing modernisation
- To increase productivity in all subsectors
- Improving funding, investment incentives & the labour force
- To increase acceptance of 4th industrial revolution (IR4.0) technologies

#### 2 EMPHASISING RESEARCH & DEVELOPMENT, AS WELL AS COMMERCIALISATION & INNOVATION

- Working closely with research agencies & tertiary institutions in the public/private sector

### SECTOR PERFORMANCE

SINCE DAN 2011-2020:

#### 1 CONTRIBUTION TO THE COUNTRY'S GROSS DOMESTIC PRODUCT (GDP) GREW

- At an average annual rate of **6.8%** in 2020
- An almost 100% increase compared to 2010

#### 2 TOTAL FOOD EXPORTS INCREASED

- At an average annual rate of **6.4%**
- RM18.1 bln** in 2010
- RM33.7 bln** in 2020

# NATIONAL FOOD SECURITY ACTION PLAN (2021-2025)

5

CORE

15

STRATEGIES

96

INITIATIVES

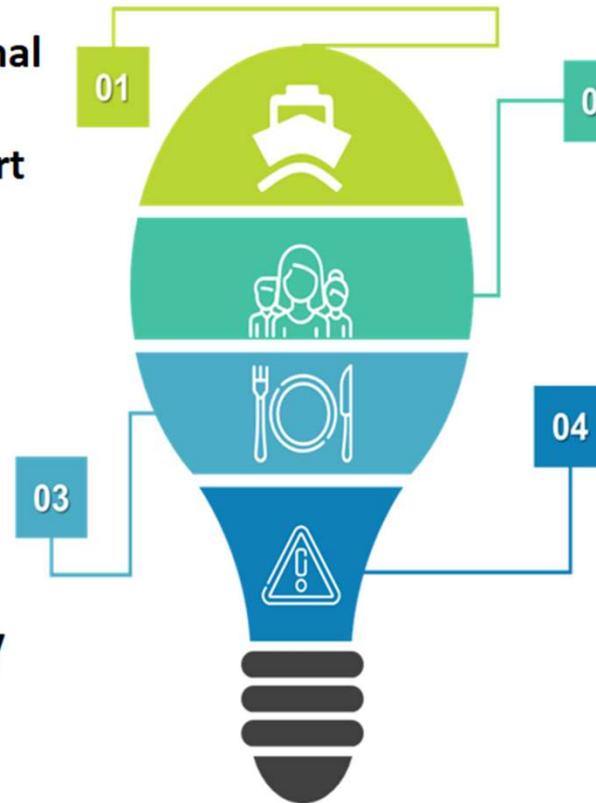

## OBJECTIVES

01 Increase internal resources and diversify import sources

02 Increase private and population involvement in the food system

03 Ensuring the availability of safe food at affordable prices and a healthy eating style

04 Ensuring the country's preparedness in facing the food security crisis

# Unmanned Aircraft System (UAS) regulation in Malaysia

## Definition of Agriculture Unmanned Aircraft System

Civil Aviation Authority Malaysia (CAAM) deems an Agricultural Unmanned Aircraft System (UAS) operations is the operations of a UAS for the purpose of :

- Dispensing any agricultural payload intended for plant nourishment, soil treatment, propagation of plant life, or pest control; or
- Engaging in dispensing '**agricultural payload**' and surveillance activities directly affecting agriculture, horticulture, or forest preservation, but not including the dispensing of live insects.
- "**Agricultural Payload**" means any dispensing materials such as pesticides and any other substances as permitted by Department of Agriculture (DOA).

## Requirement for Agriculture UAS operation

- The Agriculture UAS must be satisfied by Standard Industrial Research Institute of Malaysia (SIRIM)
- The operator need to undergo Remote Pilot Training programme and hold a valid Remote Pilot Certificate of Competency issued by CAAM .
- Must apply for the Agriculture UAS operation from CAAM before performing the operation.

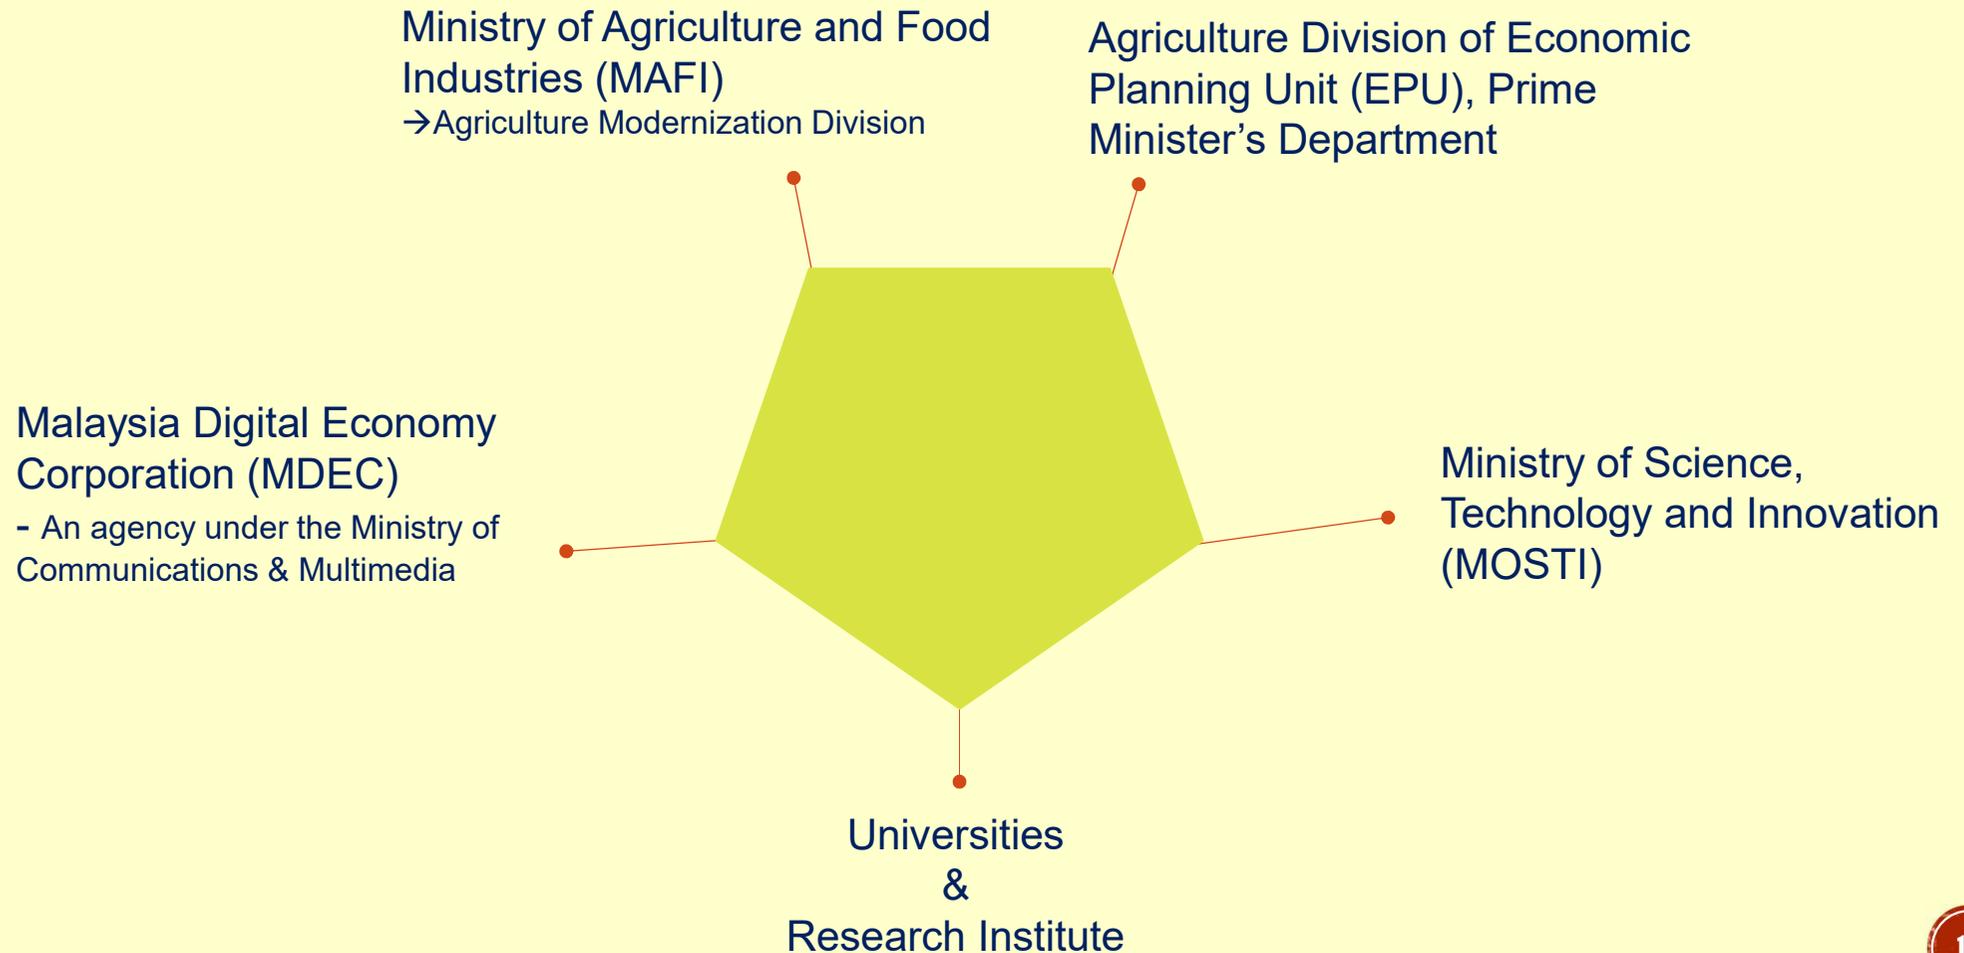

# APPROVED TRAINING ORGANISATION

- **Approved Training Organization-Remote Pilot Training Organization (ATO-RPTO)** is an organization that has been formally approved by the CAAM to submit reports for theoretical knowledge instruction and flight instruction and assessment in relation to the competency of remote pilots.
- The CAAM approves RPTO to assess the competence of remote pilots against a specific set of requirements and to supply reports to CAAM for the issuance of the certificate.
- All organizations who seek to perform Unmanned Aircraft System (UAS) remote pilot training and be approved as a Remote Pilot Training Organization (RPTO) by CAAM must follow Civil Aviation Directive 6011 Part (I) Remote Pilot Training Organization.

# OPERATIONAL REQUIREMENT

- All operation must be conducted below 400 feet above ground level and a distance of not closer than 50 meter to person, vessels, vehicles and structures uninvolved to the operation.
- All operation must be conducted beyond 9.26 km from an aerodrome and only in class G airspace.
- All operation shall be conducted in Visual Line of Sight (VLOS) or Extended Visual Line of Sight (EVLOS).

# Institutional support and involvement

# MARDI Agriculture Modernization Cluster Projects

No	Funding source	Project Title	Allocation
1	12th Malaysian Plan Development Project	Development of Integrated Modern, Smart and Precision Agriculture System based on IR 4.0 Technology and Biotechnology	RM20 million (5 years)
2		Development of High Impact and Cost-Effective Integrated Agriculture Engineering Package for Production Technology, Post-harvest Handling and Processing of Selected Agriculture Products (Paddy, fruits and vegetables)	RM15 million (5 years)
3		Development of Innovative Crop Production System for Food Security and Sustainability  Development of Innovative Crop Production System for Food Security, Sustainability and Community Welfare.	RM10 million (5 years)
4	MAFI Special Project	Development of Smart Expert System based on Artificial intelligence (AI) for Vegetable Crop at Selected Area.	RM1.2 million
5	MPPN Pioneer Project (Technology Cluster)	Application of IR4.0 Technology in Fertigation Cultivation to Increase the Productivity of Ginger Crops in Alor Setar Pilot Farm	RM60,500
6	MARDI	Application of IR4.0 Technology for Paddy Production at FELCRA Seberang Perak	RM166,000

# START-UP COMPANY IN SMART AGRICULTURE MACHINERY

Company	Solution
<b>Aerodyne</b>	<ul style="list-style-type: none"><li>• Agrimor Super Application - utilises cutting edge technologies such as autonomous drones and IoT for agriculture seedling, spraying, plant analysis mapping to grow more with less input and without human intervention</li><li>• Drones gather huge data and shorten the time to process and value with the use of AI</li></ul>
<b>Braintree Technologies</b>	<ul style="list-style-type: none"><li>• Robotic devices and proprietary software for agriculture total solutions and process satellite remote sensing data</li><li>• Drone services and AI powered computer vision algorithm for more precise and automated planting management</li></ul>

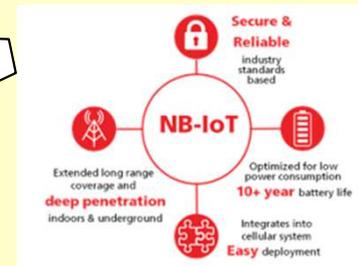

# Collaboration With Private Sector And Foreign Agencies

**MARDI**  
INSTITUT PENYELIDIKAN DAN KEMAJUAN PERTANIAN MALAYSIA

- 1. PREPARATION**  
Land Leveling Index  
Variable Rate Seeding
- 2. MONITORING**  
Pest and Disease  
Climate Change
- 3. NUTRIENT MANAGEMENT**  
Fertilizer Application
- 4. WATER MANAGEMENT**  
Water Gate Management  
Water Quality  
Water Level
- 5. HARVEST AND POST-HARVEST MANAGEMENT**  
Yield Monitoring  
Yield Prediction
- 6. LOGISTICS AND MARKETING**  
Rice Milling  
Stock Tracking  
Fleet Management
- 7. DATA**  
Data Analysis  
Cloud Computing  
Artificial Intelligence (AI)

# Collaboration With Private Sector And Foreign Agencies

## Capacity Building Program in Smart Farming and Agricultural Machinery Technology – Jeollabuk-Do, South Korea

- Objective: To further R&D capabilities through programs in smart farming and agricultural machinery technology.
- Activities:
  - Relevant intensive researches and practical experiments,
  - Acquire knowledge and an understanding of the technologies and methods.

# CONCLUSION

- ✓ Smart Agriculture is a critical technology for sustaining agriculture's function as a food supply, creating jobs, and generating revenue from export products.
- ✓ Agriculture policies have enabled Malaysia's agriculture sector to thrive sustainably and contribute to the country's economic development.
- ✓ The agricultural sector has been transformed from a traditional and passive sector focused on a particular commodity to a dynamic, diverse, and contemporary sector as a result of supportive agriculture policy from government and collaboration among key players locally and globally.
